

The user will have a unique tool for the organization and cataloging video files, both clips and commercial.

Philo also allows contextual management of audio files with videos or matched images.

With the same logic you will be able to plan generic events or linked to individual files, such as graphic display (up to 4).

Creating playlists is very simple thanks to the drag and drop of individuals elements or entire programming blocks. Alternatively, you can create a basic model, structured on the Parametric Selection of Groups, which will be used for automatic generation at the time of onair

Philo includes a basic advertising planning tool.

The software is multilingual, name and required fields are customizable.

SYSTEM REQUIREMENTS PLAYOUT

Minimum
